## AMPLIFIER WITH INTEGRATED INTERNET STREAMER

The DMPA STREAM series is a 1U half-rack Class-D public address mixing amplifier with a 100 V output transformer and switching power supply. It integrates a network media player that streams audio from platforms such as Spotify and Tidal, as well as internet radio stations. The player can be controlled via mobile app or front panel and supports Ethernet and Wi-Fi connectivity. Designed for scalable audio distribution, multiple DMPA STREAM units on the same LAN can be synchronized for multi-zone or unified system configurations. Additional features include a microphone input and emergency mute control.
