Introduction of MAXHUB Pivot

MAXHUB Pivot

- A **unified management solution** that allows IT admins to remotely manage conference devices such as IFP, UC, and digital signage.
- With Pivot's powerful device management and maintenance capabilities, it can **significantly reduce the IT management cost.**

1

Make the meeting run smoothly.

Remote management of peripheral devices

IT admins can remotely manage cameras and microphones.

- They can **view camera images** and **detect sounds** in real-time to ensure clear visibility and audibility for all participants.
- They can also **pre-configure camera parameters** and adjust angles as needed.

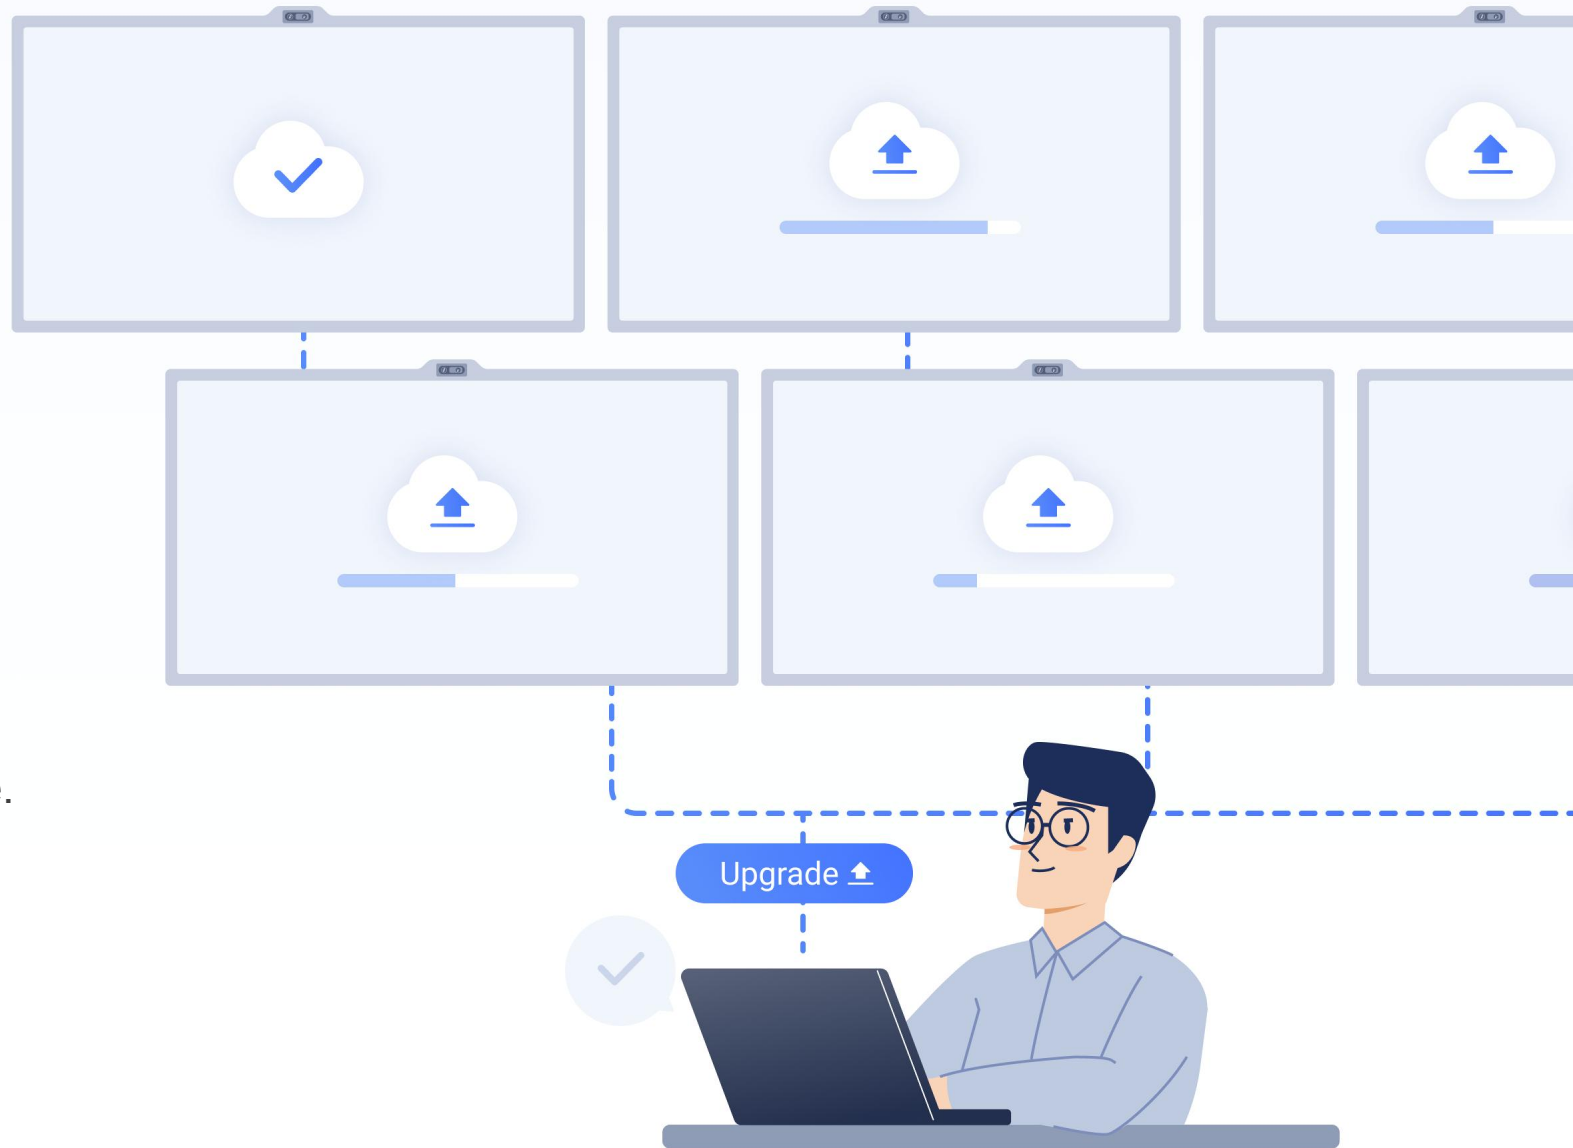

Remote screen control

IT admins can remotely monitor the screen of the IFP and promptly address any malfunctions or abnormalities. This ensures that meetings are not delayed or interrupted due to IFP issues.

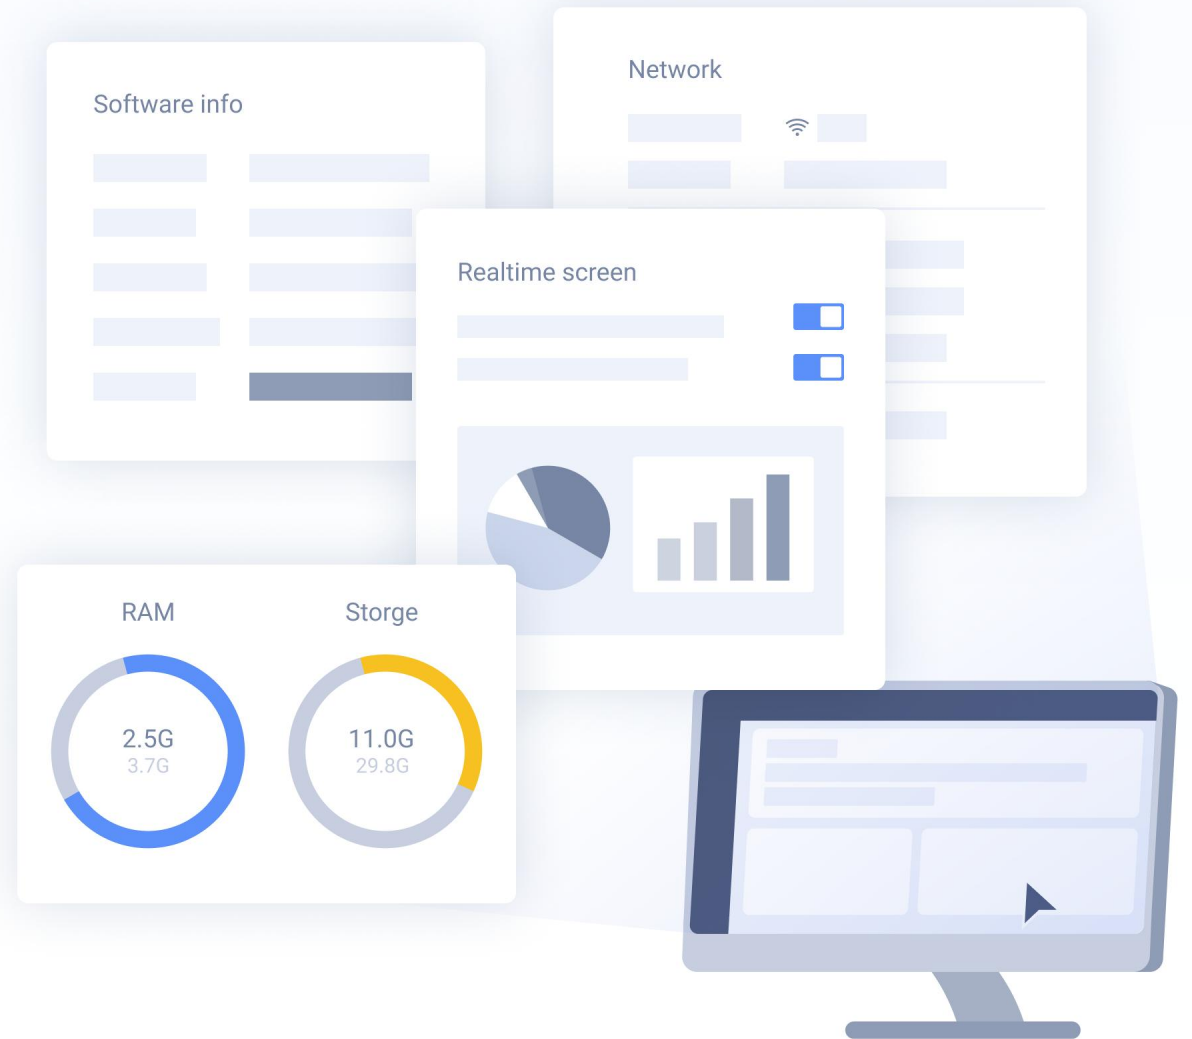

Firmware updates

IT admins can quickly update the firmware of the IFP to **keep it up-to-date, secure, and stable**. This helps with troubleshooting and ensures a great meeting experience for everyone.

Access device information

IT admins can remotely access device info like hardware/software details, network configurations, and storage status, for real-time monitoring and prompt issue detection.

2

All devices are under control.

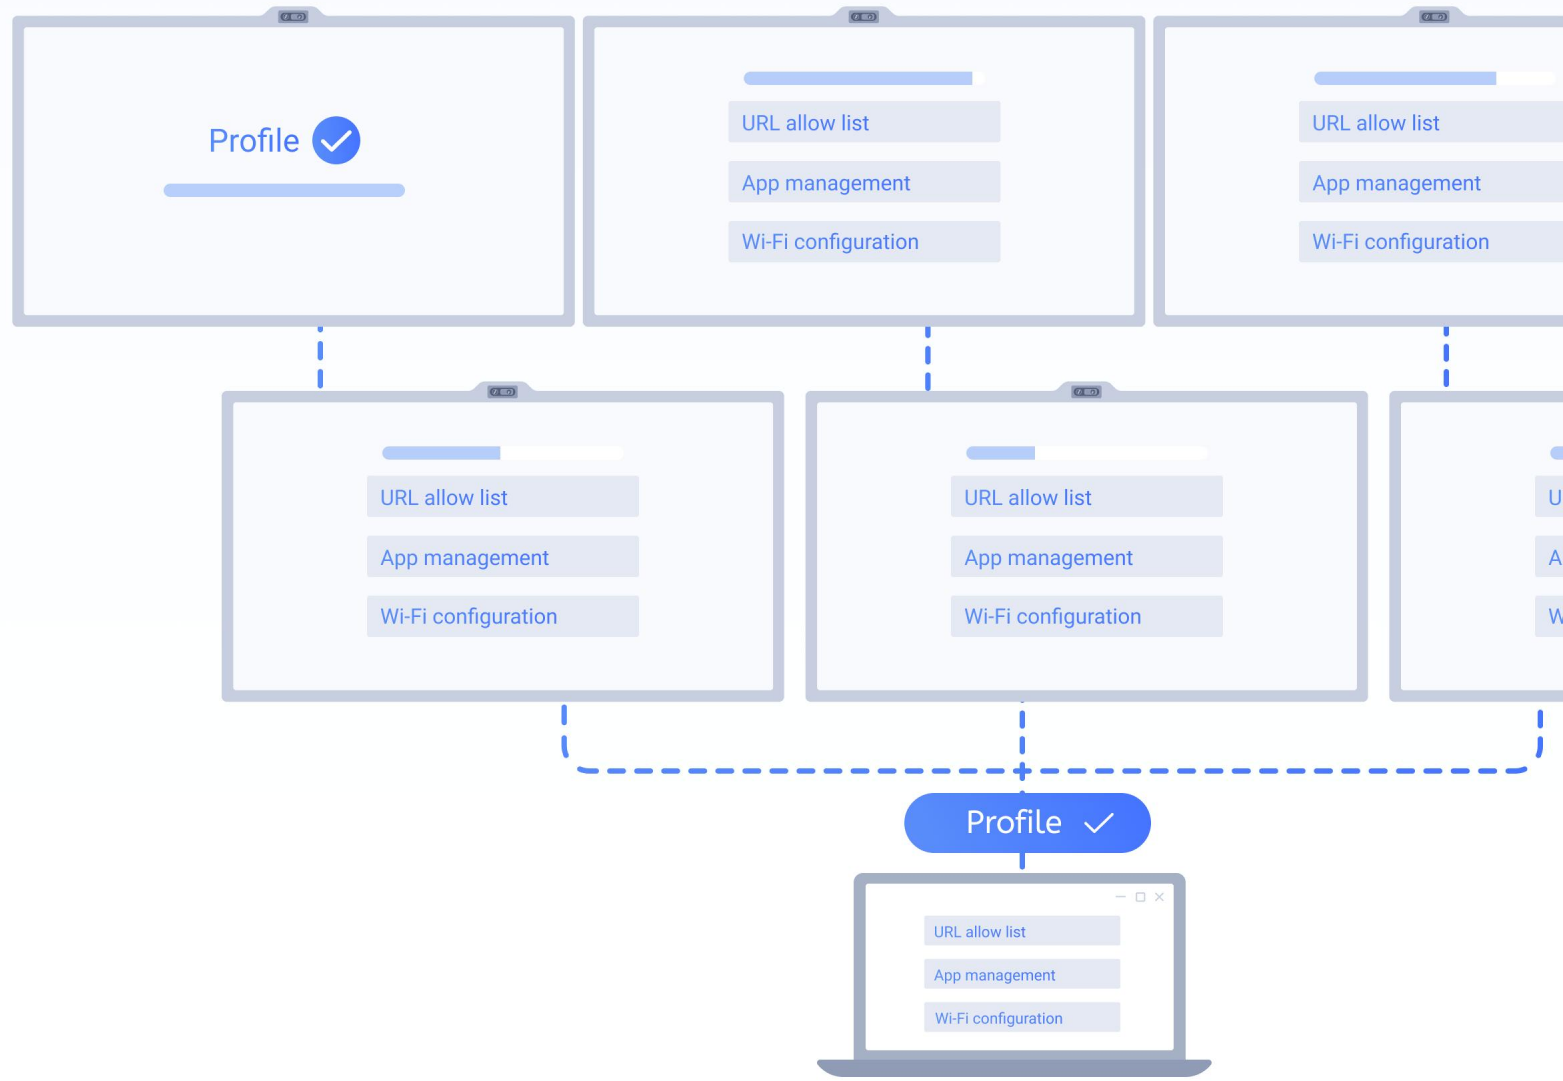

All-in-one solution

Maxhub Pivot, as an all-in-one solution, fully supports the management and control of IFP, UC products, signage, and smart podiums, providing IT admins with **an unprecedented convenient experience.**

Configure new devices in batches

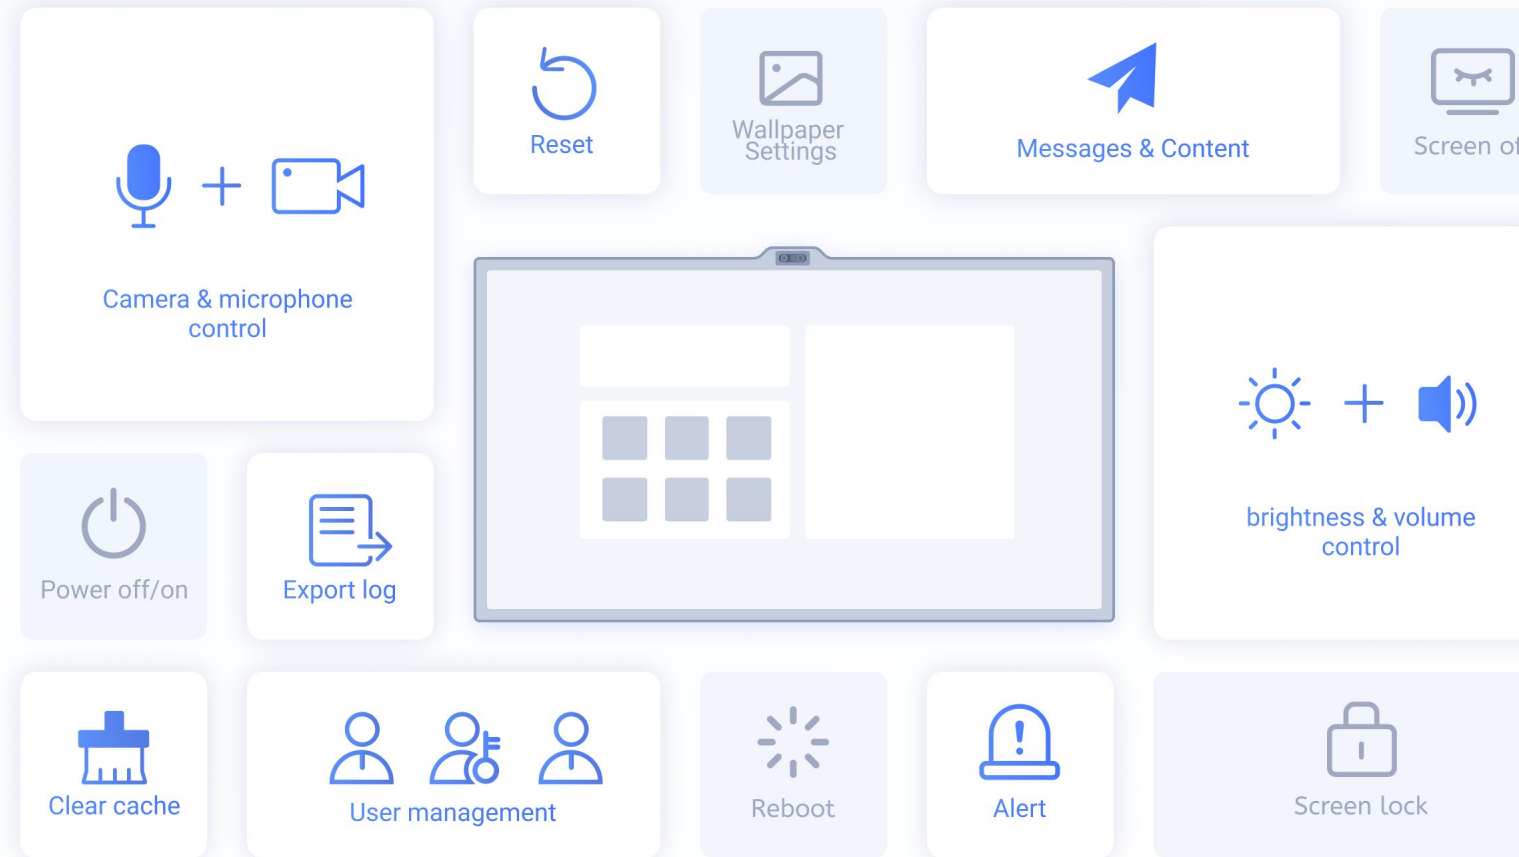

IT admins can remotely and quickly set up and deploy a large number of new devices, including time, power mode, device lock, network, firewall, certificates, etc., significantly reducing the time and workload required for configuring devices.

Deep IFP management

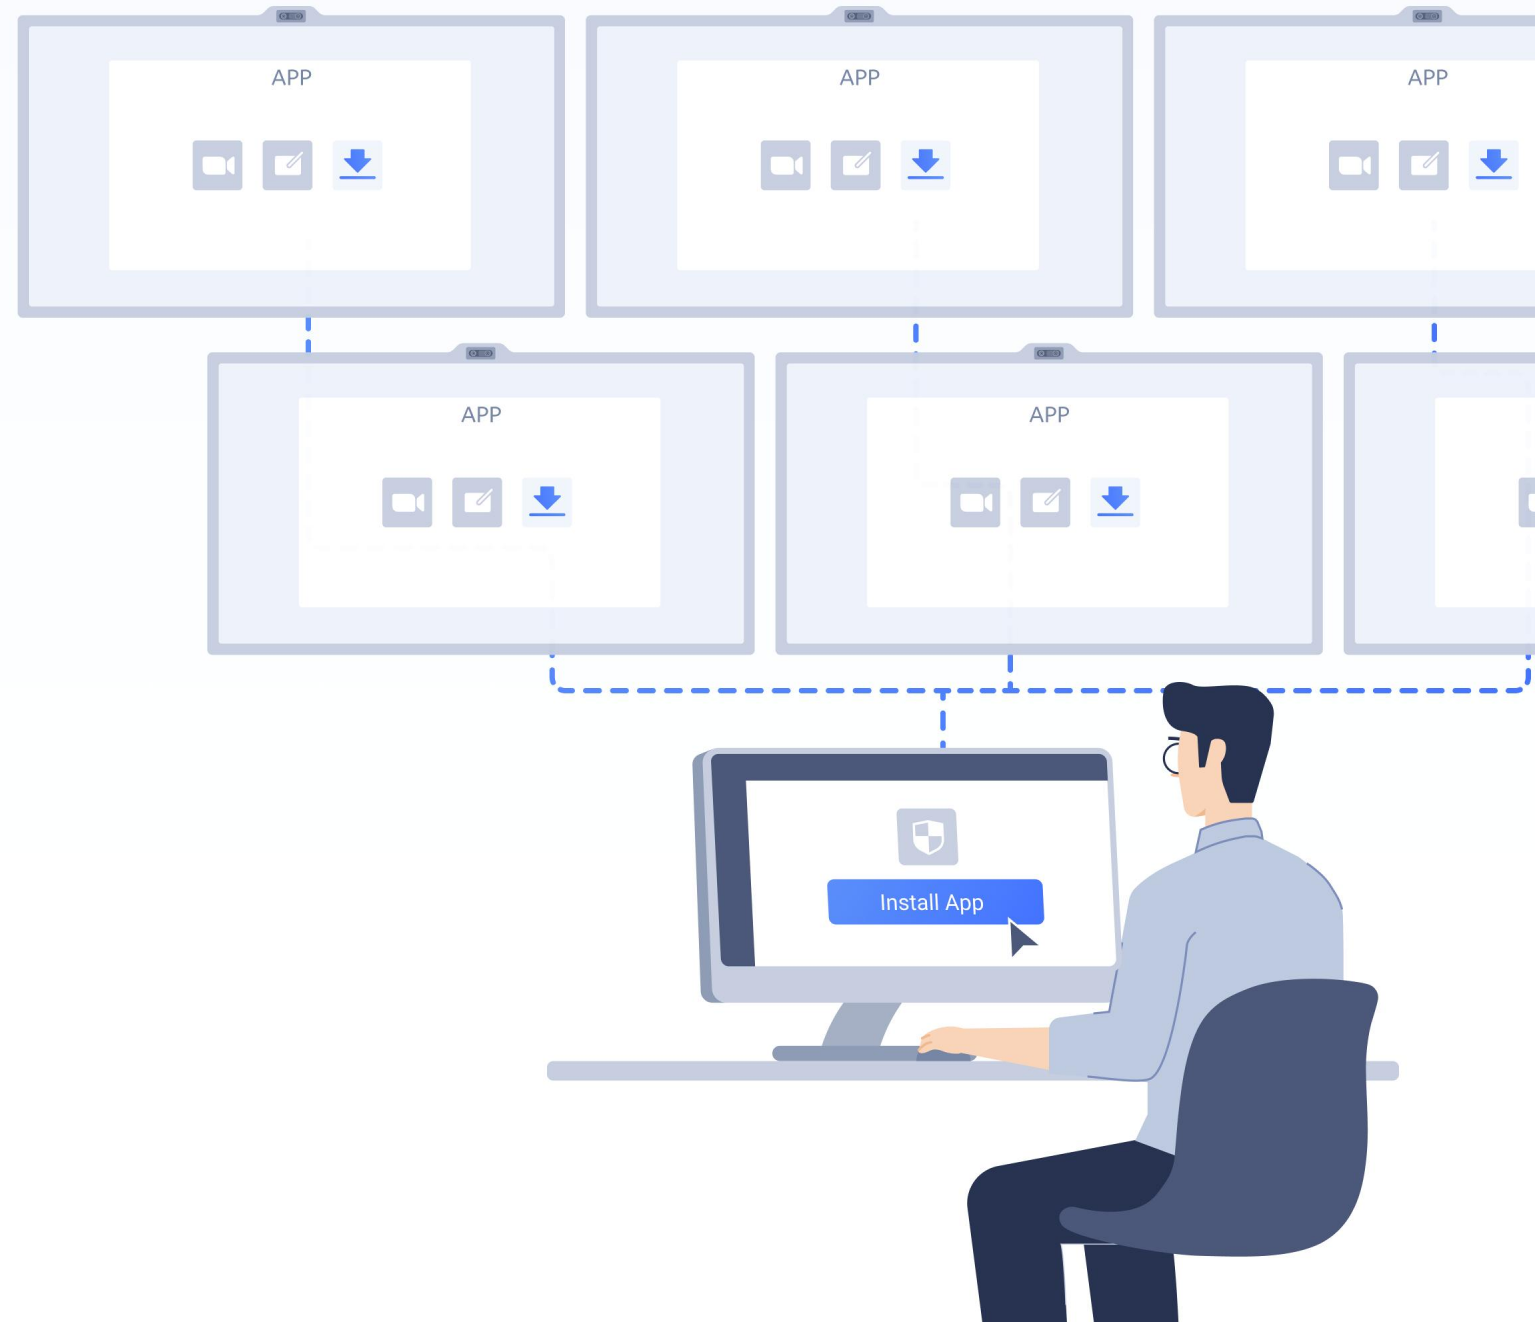

Maxhub Pivot is closely integrated with Maxhub IFP.

In addition to basic hardware controls like power on/off, reboot, and wallpaper settings, it also offers a variety of advanced features such as **factory reset**, **cache clear**, and **log export**.

Remote application management.

IT admins can remotely install, uninstall, enable, and disable applications on multiple IFP devices with the web console, eliminating the need to be physically present on-site.

3

Optimize organization device resources.

Get powerful insights and analytics

Maxhub Pivot provides detailed **device and application usage data reports**, enabling IT admins to have a comprehensive understanding and analyze the device usage within the entire organization, thus optimizing resources more effectively.

4

Get started with MAXHUB Pivot.

Register and use Pivot for free
